

# Understanding Your Cataract Options

Standard Cataract Surgery	Laser-Assisted Cataract Surgery	Astigmatism Correcting Cataract Surgery	Advanced Lens Cataract Surgery	Light Adjustable Lens™
<b>Vision Goal</b>	<b>Vision Goal</b>	<b>Vision Goal</b>	<b>Vision Goal</b>	<b>Vision Goal</b>
I do not mind wearing glasses after cataract surgery for correction of any distance (near or far.)	I would like the laser to complete some of the steps of cataract surgery. This will be combined with the lens selected that is best for my vision needs. (Basic Fixed Focus lens)	I would like to reduce my existing astigmatism with cataract surgery and the goal is to reduce my need to wear glasses for distance. I understand I will need glasses for tasks requiring near and intermediate vision. The surgery will be done with laser assistance.	I would like to reduce my dependency on glasses for all ranges of vision (distance, intermediate and near.) I understand I may need glasses for certain tasks, in low light, and/or very fine work. The surgery will be with laser assistance.	I would like to reduce my dependency on glasses for all ranges of vision (distance, intermediate and near.) I want Dr. Lindahl to be able to customize/optimize my vision after surgery.
<b>Procedure Overview</b>	<b>Procedure Overview</b>	<b>Procedure Overview</b>	<b>Procedure Overview</b>	<b>Procedure Overview</b>
Remove cataract and replace with Basic Fixed Focus lens.	Uses laser for certain steps of cataract surgery and can reduce astigmatism.	Remove cataract and replace with TORIC (astigmatism reducing) lens.	Remove cataract and replace with Advanced (Extended Depth of Focus or Multifocal) lens. *TORIC reduces astigmatism.	Remove cataract and replace with Light Adjustable Lens with up to 3 adjustments post-surgery.
