

Start taking these drops two weeks before the cataract consult appointment 4X a day
(You may stop them after the consult unless instructed to continue by the doctor)

- Please purchase one of the above drops from any grocery store or pharmacy. Any type of Refresh or Systane drops are ok.
- This is very important because it will get your surfaces ready for the tests we will perform at your consultation.
- Don't take any drops within one hour of your appointment time.

We also sell Artificial Tears in our office which work very well. They are not available in pharmacies.
